Total Reward $= \sum_{i=1}^{I} R_i$

where R_i is the Reward received

Random agent

Reward = -1

Reward = -1

Reward = -1

Reward = -100

then

total = -1 + (-1) + (-1) + (-100)

= -103

Average Reward

Average Reward = $\frac{\text{Total Reward}}{\text{no. of steps}}$

= $\frac{-103}{4}$

= -25.75

for episode 1:

total reward = -119

Average reward = $\frac{-119}{20}$ = -5.95

for episode 2:

total reward = -114

Avg reward = $\frac{-114}{15}$ = -7.60
